

The City of Jasper has partnered with **Consolidated Pipe & Supply Company/Master Meter** to upgrade all water meters with new Advanced Metering Infrastructure (AMI) technology.

All water that enters your residence or business is currently measured through a manually read meter that records the amount of water being used.

With a new AMI meter, water usage information or “consumption” is recorded by the meter and then remotely transmitted to City Hall every day. This means that nearly real time information on consumption and potential leak situations is available to not only our Utility Billing Department, but also to our customers!

In the next few months, **Consolidated Pipe & Supply Company** will start constructing the base station and repeater infrastructure. During this same time, crews will start changing out water meters.

Meter change outs will be coordinated through the **City of Jasper** and will be performed by **Consolidated Pipe & Supply**, along with their utility subcontractor **M&E Construction**. All field personnel will either be in **City of Jasper** uniform or have ID badges for **Consolidated Pipe & Supply** or **M&E Construction**.

We anticipate that the meter change out process will take several weeks, and we will be sure to keep you updated as to the official start date for the project and as milestones are achieved.

Be sure to follow the City’s Facebook page and the City of Jasper website ([www.jasper-ga.us](http://www.jasper-ga.us)) for more information.
